CARES Foundation's Podcast...

CAH Pulse

Season 3 | Episode 2: Lupe and Christina

Raising a CAH Superstar

When Lupe's daughter Christina was born, everything changed in an instant. After a difficult pregnancy and an unexpected diagnosis of CAH, Lupe found herself navigating a condition she had never heard of.

In this episode of CAH Pulse, Stephanie and Dina learn about Lupe's emotional early days of Christina's diagnosis, the powerful reassurance from doctors that set the tone for her life, and how her family learned to manage life with CAH. Today, Christina is a thriving, softball-loving three-year-old with a big personality!

Lupe's story is about resilience, family, and raising a child who proves that kids with CAH can live full, beautiful lives.

Catch up on all of the latest episodes of CAH Pulse!

Recent Episodes:

Season 3 | Episode 1: Karter - "You gotta just do it"

Insights, Positivity, and Advice from a Seventeen-Year-Old Salt Waster

Season 2 | Episode 12

Non-Classical CAH - Fertility Treatment and the Importance of Genetic Testing

Season 2 | Episode 11

Dimitri: The Long Game of Drug Discovery

Season 2 | Episode 10

Brittany: Demanding Change After a Lack of Answers and Getting Nowhere

Season 2 | Episode 9

Kristina: We're going to call your baby...'Baby'" - Removing the Stigma from CAH

YOUR VOICE MATTERS

Has your baby received a positive newborn screening result in the state of Ohio? We invite you to join our Newborn Screening Family Advisory Committee.

Why Join?

Your experience matters. By sharing your story and perspective, you can help improve newborn screening systems, support other families, develop educational materials, and guide health professionals and policymakers in creating more family-centered care.

Who Should Join?

Parents and caregivers whose child received a positive newborn screening result for genetic disorders (endocrine and metabolic); sickle cell disease; congenital heart defects or early hearing disorders since 2016 in the state of Ohio.

What to Expect

- Orientation and training
- One-hour, quarterly virtual meetings through 2028
- Opportunities to share feedback on educational materials, outreach, and services
- A supportive space where your insights are valued
- Participants are encouraged to attend all sessions
- Incentives for your time and participation

If you have any questions, please email: contact@caresfoundation.org

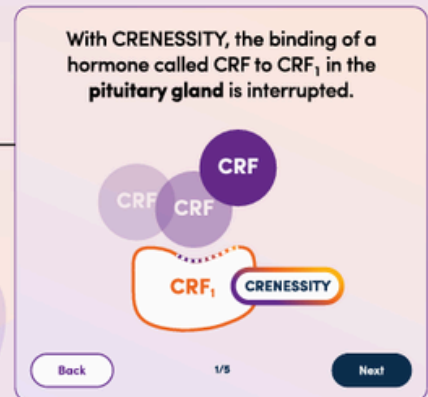

CRENESSITY works directly to lower ACTH and androgens in people with classic CAH

Explore an interactive feature to learn how CAH affects the body and how CRENESSITY works.

Explore now at [CRENESSITY.com](https://www.crenessity.com)

Coming soon:

Keep an eye out for **new videos** featuring Lauren, a person living with classic CAH, and Dr. Lin, an endocrinologist, as they discuss how CAH affects the body and CRENESSITY's innovative approach to CAH management.

ACTH=adrenocorticotropic hormone; CRF=corticotropin-releasing factor; CRF₁=corticotropin-releasing factor type 1.

Approved Uses:

CRENESSITY (crinecerfont) is a prescription medicine used together with glucocorticoids (steroids) to control androgen (testosterone-like hormone) levels in adults and children 4 years of age and older with classic congenital adrenal hyperplasia (CAH).

IMPORTANT SAFETY INFORMATION

Do not take CRENESSITY if you: Are allergic to crinecerfont, or any of the ingredients in CRENESSITY.

CRENESSITY may cause serious side effects, including:

Allergic reactions. Symptoms of an allergic reaction include tightness of the throat, trouble breathing or swallowing, swelling of the lips, tongue, or face, and rash. If you have an allergic reaction to CRENESSITY, get emergency medical help right away and stop taking CRENESSITY.

Risk of Sudden Adrenal Insufficiency or Adrenal Crisis with Too Little Glucocorticoid (Steroid) Medicine. Sudden adrenal insufficiency or adrenal crisis can happen in people with congenital adrenal hyperplasia who are not taking enough glucocorticoid (steroid) medicine. You should continue taking your glucocorticoid (steroid) medicine during treatment with CRENESSITY. Certain conditions such as infection, severe injury, or shock may increase your risk for sudden adrenal insufficiency or adrenal crisis. Tell your healthcare provider if you get a severe injury, infection, illness, or have planned surgery during treatment. Your healthcare provider may need to change your dose of glucocorticoid (steroid) medicine.

Before taking CRENESSITY, tell your healthcare provider about all of your medical conditions including if you: are pregnant or plan to become pregnant, or are breastfeeding or plan to breastfeed.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins and herbal supplements.

The most common side effects of CRENESSITY in adults include tiredness, headache, dizziness, joint pain, back pain, decreased appetite, and muscle pain.

The most common side effects of CRENESSITY in children include headache, stomach pain, tiredness, nasal congestion, and nosebleeds.

These are not all the possible side effects of CRENESSITY. Call your healthcare provider for medical advice about side effects. You are encouraged to report negative side effects of prescription drugs to the FDA. Visit MedWatch at www.fda.gov/medwatch or call 1-800-FDA-1088.

Dosage Forms and Strengths: CRENESSITY is available in 50 mg and 100 mg capsules, and as an oral solution of 50 mg/mL.

Please see full [Prescribing Information](#).

Eton Cares® supports your child every step of the way

When your prescription is sent to our specialty pharmacy Anovo®, this is what you can expect:

1. **Welcome Call** from your Care Coordinator to verify prescription, offer support, and answer questions.
2. **Insurance Verification** to review coverage and benefits.
3. **Financial Assistance Review** to explore copay programs and other support options.
4. **Medication Delivery** with instructions and product-specific information.
5. **Ongoing Pharmacy Support**, including refill coordination, reminders, and 24/7 access to a pharmacist.
6. **Nurse Ambassador Support** to help you and your child stay on track with treatment, answer health or medication questions, and provide regular check-ins by phone.

For questions or support, contact our specialty pharmacy Anovo®: Call 1-833-343-2500

(Care Team: Mon-Fri, 8:00 am-5:00 pm CST, Pharmacy Team: 24/7, 365 days a year)

**\$0 copay
for eligible
patients***

*Commercially eligible patients can pay \$0 per month. Restrictions, limitations, and/or eligibility requirements may apply.

Learn more about Eton Cares at [ALKINDI SPRINKLE](#) or [KHINDIVI](#).

USE AND IMPORTANT SAFETY INFORMATION FOR:

- ALKINDI SPRINKLE® (hydrocortisone) oral granules and
- KHINDIVI™ (hydrocortisone) 1 mg/mL oral solution

USE

ALKINDI SPRINKLE

ALKINDI SPRINKLE is a corticosteroid indicated for replacement therapy in pediatric patients with adrenocortical insufficiency.

KHINDIVI

KHINDIVI is a corticosteroid indicated as replacement therapy in pediatric patients 5 years of age and older with adrenocortical insufficiency.

Limitation of Use for KHINDIVI

KHINDIVI is not approved for increased dosing during periods of stress or acute events. Use a different hydrocortisone-containing drug product for stress dosing.

IMPORTANT SAFETY INFORMATION FOR ALKINDI SPRINKLE AND KHINDIVI

WHEN USING ALKINDI SPRINKLE OR KHINDIVI

Always give ALKINDI SPRINKLE or KHINDIVI exactly as your doctor has directed. Do not take ALKINDI SPRINKLE or KHINDIVI if you are allergic to hydrocortisone or any of its other ingredients.

Adrenal Crisis: Giving too low a dose or stopping medication can cause low levels of cortisol, which can result in serious illness or death. Treatment with intravenous hydrocortisone should be started immediately. When switching from another type of hydrocortisone to ALKINDI SPRINKLE or KHINDIVI, watch your child closely for any changes. If your child doesn't get the entire dose of ALKINDI SPRINKLE because of vomiting or spitting some granules out, contact your doctor to see if another dose is needed. When taking KHINDIVI during periods of stress, such as infections or after surgery, your doctor should switch to another oral hydrocortisone product and increase the dose.

Immunosuppression and Increased Risk of Infection With Use of a Dosage Greater Than Replacement: Use of a greater than replacement dosage can suppress the immune system and increase the risks of new infections or exacerbation of latent infections with any pathogen, including viral, bacterial, fungal, protozoan, or helminthic infections. Contact your healthcare provider if any infections develop.

Growth Retardation: The long-term use of corticosteroids in high doses may cause growth retardation in children.

Decrease in Bone Density: Corticosteroids can affect your child's bone growth and strength.

Cushing's Syndrome Due to High Doses of Corticosteroids: Treatment with high doses of corticosteroids can cause Cushing's syndrome. Treatment should be limited to the smallest dose required, and your child's growth and development monitored appropriately.

Psychiatric Changes: Corticosteroids can change your child's behavior or mood. Tell your doctor if your child has periods of extreme happiness, extreme sadness, hallucinations, or depression.

Changes in Vision: Tell your doctor if your child has blurred vision or other vision problems during treatment with ALKINDI SPRINKLE or KHINDIVI.

Gastrointestinal Adverse Reactions: Tell the doctor if your child has stomach pain, upset stomach, black, tarry stools, or vomiting of blood. These could be signs of ulcers or tears in the stomach or intestines. Taking anti-inflammatory nonsteroidal drugs, like ibuprofen, naproxen, or aspirin, can increase the risk of ulcers or tears.

Vaccination: Administration of live vaccines may be acceptable in ALKINDI SPRINKLE-treated and KHINDIVI-treated pediatric patients with adrenocortical insufficiency who receive replacement corticosteroids.

ADDITIONAL IMPORTANT SAFETY INFORMATION FOR KHINDIVI

Systemic Adverse Reactions Due to Inactive Ingredients

Hyperosmolarity: KHINDIVI is not approved in children less than 5 years of age. The inactive ingredients in KHINDIVI can cause dangerous fluid imbalances.

Metabolic Acidosis and Other Adverse Reactions: Some ingredients in KHINDIVI may cause a buildup of acid in the body, low blood sugar, or injuries to the liver, kidneys, or brain that may increase the risk of adrenal crisis.

Laxative Effects Due to Inactive Ingredients: Some ingredients in KHINDIVI may cause stomach upset, resulting in vomiting and/or diarrhea and could increase the risk of adrenal crises in patients.

ADVERSE REACTIONS

The most common side effects of ALKINDI SPRINKLE or KHINDIVI include retaining fluids, changes in glucose tolerance, high blood pressure, behavioral and mood changes, greater appetite, and weight gain.

Additional side effects of KHINDIVI are reactions to inactive ingredients.

FOR ADDITIONAL INFORMATION ON ALKINDI SPRINKLE AND KHINDIVI

If you are being treated with ALKINDI SPRINKLE, please visit ALKINDISPRINKLE.com/patient for more information. If you are being treated with KHINDIVI, please visit KHINDIVI.com/patient for more information.

You are encouraged to report negative side effects of prescription drugs by contacting Eton Pharmaceuticals, Inc. at 1-855-224-0233 or the U.S. Food and Drug Administration (FDA) at www.fda.gov/safety/medwatch or call 1-800-FDA-1088.

Please see full Prescribing Information for more information on [ALKINDI SPRINKLE](#) and [KHINDIVI](#).

Are You or Your Child Facing Challenges Due to CAH?

Consider Joining a Clinical Research Study

Crinetics is a pharmaceutical company that develops much-needed therapies for people with endocrine diseases. We are currently enrolling adults and children who have been diagnosed with classic congenital adrenal hyperplasia (CAH).

The Calm-CAH (adult) and Balance-CAH (pediatric) studies are looking to understand the safety and effectiveness of an investigational study drug, atumelnant, whether it may reduce the dosage needed for steroid medications like glucocorticoids (GCs), and how it may help manage symptoms of CAH.

To participate in these studies, you or your child must:

- Be 1 to 74 years of age
- Have received a diagnosis of classic CAH
- Be on a stable GC regimen (for example: modified-release hydrocortisone, cortisone acetate, prednisolone, prednisone, methylprednisolone, and dexamethasone)

Additional requirements apply, which the study team will discuss with you.

Atumelnant is an investigational study drug, which means it has not been approved by any regulatory authority and is still under investigation as a potential treatment for CAH.

To learn more or to see if you or your child may qualify, scan the QR code or visit CrineticsCAH.com.

Saturday & Sunday - October 17 & 18, 2026

New York Presbyterian-Weill Cornell Medical Center, New York, NY

We invite you to join CARES Foundation for the **2026 Annual CARES Foundation's Patient Education Conference!**

We are looking forward to a weekend filled with informative speakers & helpful breakout sessions, the chance to meet & connect with other patients, parents, families, medical professionals, and more!

If you would like to participate in patient/caregiver panels:

Adult Men

Adult Women

Teens

Transition to Adulthood

Please contact dina@caresfoundation.org as soon as possible!

If you are interested in learning more about registration when it becomes available, please reach out to contact@caresfoundation.org.

CARES FOUNDATION'S PATIENT ADVISORY SUMMIT

Monday, October 19, 2026

CARES is seeking patients and caregivers living with Classic CAH to join an advisory session concurrent with the 2026 CAH Patient Education Conference in New York City. The purpose of the advisory board is for representatives from the pharmaceutical industry to listen to patient/caregiver insights on living with and managing CAH.

Participants will be compensated for their time.

If you are interested in participating, please reach out to dina@caresfoundation.org.

(Only individuals who have not previously served can participate)

We ask that you please stay up-to-date with CARES Foundation's website & social media for more information on when registration for these events will open. (www.caresfoundation.org)

Preventing Adrenal Crisis Events

PACE App

Have you downloaded it yet?

The Preventing Adrenal Crisis Events (PACE) app is available to patients, parents/caregivers, and medical professionals and is designed to provide readily accessible information and instructions for effectively managing AI (Adrenal Insufficiency). The app will include stress dosing and intramuscular injection techniques as well as other helpful tools.

Now Available in Spanish

SCAN TO DOWNLOAD!

(APPLE APP STORE)

This application can also be found on the Apple App Store, by searching “PACE by ChaiCore”.

(GOOGLE PLAY STORE)

This application can also be found on the Google Play Store, by searching “PACE by ChaiCore”.

VISIT BOTH YOUR HOME'S AND SCHOOL'S EMS/FIREHOUSE!

Did you know that most ambulances do not carry Solu-cortef®?

Furthermore, that they are not allowed to administer the shot even if you have it? We are at work to develop EMS protocols for emergency medical treatment of CAH and other adrenal insufficiencies. Too many people suffer from delayed medical care in emergency situations.

A well-planned visit to your firehouse and/or EMS station could save your life or the life of a loved one.

While on this visit, give them printed out materials that you can download from our website. These include helpful tips for your visit, our emergency instructions brochure, and advice on how to call attention to CAH/AI treatment by having them flag your residence for this condition.

Visit: <https://caresfoundation.org/be-prepared-in-an-emergency/>

Be Prepared for Travel! Stay prepared in the event of an emergency

We want to remind you that there are great resources for travel, emergency situations, and available in our shop to ensure that you are well-prepared no matter where you are.

We encourage you to visit both of our [Be Prepared in an Emergency](#) and [EMS Advocacy](#) pages on the CARES Website. Here you will find a variety of tools such as:

- Information regarding signs of adrenal crisis
- [CARES Emergency Instructions Brochure](#)
- Printable Medical ID Cards
- [Medication Safety Alert Letter](#)
- [Emergency Instruction Video](#)
- [The PACE \(Preventing Adrenal Crisis Events\) App](#)
- Links to many helpful items in [the CARES Shop](#)

If you have any ideas for helpful tools/resources that we may be able to offer/provide, please do not hesitate to reach out to contact@caresfoundation.org.

(If on a mobile device: **ABOUT**, then **GROUPS**). You should now be able to view and click on the group/groups that you are interested in, and can then request access to join those specific groups/groups.

If you are having trouble accessing a certain group, or have any outstanding requests for access, please do not hesitate to contact john@caresfoundation.org.

JOINING THE CARES COMMUNITY

We encourage patients, family members, relatives, medical professionals, and others who are impacted by CAH to join our community. This account is completely free to create, and the best way to stay up-to-date on all important information, news, research, events, and more within the CARES Community!
